---

## Professional Summary

Obsessed full-stack web developer with 2+ years of experience building and shipping web and mobile applications. Strong MySQL database skills and hands-on experience deploying APIs and payment integrations. Comfortable across front-end and back-end stacks (Next.js / Node.js / PHP / Cordova) and the full project lifecycle, from UI/UX design to production deployment. Fast learner, practical problem solver and passionate about building performant, maintainable systems.

---

## Technical Skills

- **Languages & Frameworks:** JavaScript (ES6+), TypeScript, PHP, HTML5, CSS3, Bootstrap
  - **Frontend:** React, Next.js, jQuery
  - **Backend & APIs:** Node.js, Express, PHP (server-side scripting), REST API design
  - **Databases:** MySQL (strong), LocalStorage (front-end persistence)
  - **Tools & Platforms:** Git/GitHub, Vercel (deployments), Android Studio, Cordova
  - **Payments & Integrations:** Flutterwave, Monnify/Monify
  - **Other:** Responsive UI/UX design, basic mobile app packaging (Cordova)
- 

## Professional Experience

### CHOV LLC — Lead Developer

*July 2017 – March 2022*

- Led full-stack development for the FarmTransact multi-user e-commerce mobile app and website; collaborated with UX designers to deliver responsive interfaces and robust backends.
- Implemented payment and wallet systems using Flutterwave and Monnify APIs to manage deposits, withdrawals and transactions.
- Built server-side wallet and pin-generator scripts (12-character alphanumeric codes) to support account verification and student result-checking features.
- Deployed web and mobile apps to live servers and to the Play Store (Cordova-wrapped website app).
- Built additional features such as an accounting module for school portals and an automated certificate generator for course completion.
- Designed UI/UX for WLX Logistics and contributed to overall product architecture decisions.

## Automation & Script Integration on N8N & APIs and AI-powered workflows.

- Design and implement custom automation systems that streamline repetitive tasks, connect disparate tools, and reduce manual effort using n8n.
  - Build AI-enhanced integrations (content pipelines, data enrichment, scheduling, image processing, and SEO automation) to improve efficiency and accuracy.
  - Deliver cost-effective solutions that provide measurable ROI by saving time, cutting errors, and automating operational workflows.
  - Offer end-to-end automation services: API integrations, webhook handling, error handling and monitoring, documentation, and ongoing maintenance.
  - Representative projects:
    - Solana Memecoin Tracker Automation;  
<https://www.upwork.com/freelancers/~01166f8baa4c8cf251?p=1946550360056872960>
    - LinkedIn Automation — Content + Image → SEO → Post every 6 hrs;  
<https://www.upwork.com/freelancers/~01166f8baa4c8cf251?p=1946441164388909056>
    - Twitter Workflow Automation — Topic → Content → SEO → Post every 2 hours;  
<https://www.upwork.com/freelancers/~01166f8baa4c8cf251?p=1946433996646883328>
- 

## Freelance & Contract Projects

### Ticky — UI/UX & Backend (Mar 2022)

- Designed end-to-end UI/UX from splash screen to dashboard and implemented backend endpoints for ticketing workflows using PHP and jQuery.

## TrinServices — E-commerce Frontend & Cart (Jul 2022)

- Built responsive frontend with Bootstrap 5 and implemented cart persistence using JavaScript and localStorage to preserve cart state across sessions.

## Suzzyque — E-commerce Frontend (Jan 2017)

- Implemented responsive layout and interactive shopping features using Bootstrap, HTML, CSS and JavaScript.
- 

## Selected GitHub Projects & Deployments

- **healthcoach** • *Offline ML-based primary healthcare checker* — An offline-first health assistant that analyses user symptoms and provides diagnostic suggestions. (Vercel: [healthcoach-theta.vercel.app](https://healthcoach-theta.vercel.app))
- **nerospace / nerospacebackend** • *Decentralised talent / waitlist platform* — Next.js + Node.js projects used for the Nerospace ecosystem. (Vercel: [nerospace-three.vercel.app](https://nerospace-three.vercel.app), [nerospacebackend.vercel.app](https://nerospacebackend.vercel.app))
- **marginplustrial** • *Frontend engineering trial* — Next.js project showcasing UI responsiveness and deployment (Vercel: [marginplus-six.vercel.app](https://marginplus-six.vercel.app)).
- **SolanaKeypairGenerator** • *CLI tool* — Small, secure command-line tool to generate Solana-compatible keypairs; supports JSON export for developer testing.
- **NextEcommerce** • *E-commerce starter* — Example storefront and components demonstrating responsive layouts and checkout flows.
- **Payee** • *Campus fintech app* — Fintech project focused on campus payments and biometric workflows (public repo with features and documentation).
